

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-16 Canceled.

17. (New) Watch, comprising a case, at least one watch movement located in the case, and at least one display to display the time of day or other information, wherein at least one section of the watch is movable, specifically, rotatable, wherein the case is composed of an outer case and an inner case, and the inner case is movably attached to the outer case, as a result of which a previously nonvisible side of the movable inner case of the watch moves so as to lie on top,

characterized in

that the at least one display is located on the inner case, and that the inner case is able to fold out of the outer case so that at least one additional laterally oriented display is visible.

18. (New) Watch according to Claim 17,
characterized in,
that the inner case has two opposing horizontal displays.

19. (New) Watch according to claim 17,
characterized in
that in the folded-shut state the then nonvisible display and the nonvisible lateral display are de-energized.

20. (New) Watch according to claim 17,
characterized in
that in the folded-open state the displays visible to the viewer are rendered so as to be visible and readable for the viewer.

21. (New) Watch according to Claim 20,
characterized in
that when inner case is reversed means are used to make rotatable by 180° the lateral display and the display which becomes visible when the watch is folded open.
22. (New) Watch according to Claims 17,
characterized in
that operating elements, specifically, a crown and/or at least one push-button are configured so as to allow adjustment of watch functions on the inner case.
23. (New) Watch according to Claims 17,
characterized in
that operating elements, specifically, a crown and/or at least one push-button are configured so as to allow adjustment of watch functions on the outer case.
24. (New) Watch according to Claim 23,
characterized in
that the crown includes elements by which the crown engages a crown shaft located within the inner case, and or the push-button includes elements by which a momentary-contact switch located within the inner case can be actuated.
25. (New) Watch according claim 17,
characterized in
the lateral display is mechanically or electronically unlocked and is able to folded open by means of an ejection element.

26. (New) Watch according to Claim 25,
characterized in
that the electronic unlocking of lateral display is performed automatically by an
electronic signal, specifically, an alarm or by an incoming SMS signal.
27. (New) Watch according to Claim 25,
characterized in
that the ejection element is a spring.
28. (New) Watch according to claim 17,
characterized in
that the inner case accommodates at least one watch movement.
29. (New) Watch according claim 17,
characterized in
that a battery supplies power to the at least one watch movement and/or multiple
displays.
30. (New) Watch according to claim 17,
characterized in
that the battery is laterally insertable into the inner case and is attachable by retaining
elements.
31. (New) Watch according to claim 17,
characterized in
that solar cells are located on the watch crystals, and/or at least one of the displays,
and/or outer case, and/or the inner case, and/or the strap.

32. (New) Watch according claim 17,
characterized in
that the inner case is lockable at different positions by detents which are located on the
pivot, and/or between the outer case and the inner case.
